Each MOI component is based on a survey question asking if occupancy is higher, about the same, or lower in the current compared to the prior quarter.

An MOI component is then calculated from the percentage responses using the diffusion-index formula (Higher Occupancy - Lower Occupancy + 100) / 2.

The Multifamily Occupancy Index is a weighted average of three component indices: .3632×Class A + .4630×Class B + .1738×Class C.

The weights are derived from a statistical analysis of the relationship between the components and the Census series on rental vacancy rates in structures with 5+ apartments.
